With a composition that alludes to mass and weight, Apollo is a lamp made from a solid piece of machine-turned brass or aluminium.

ABOUT

With a composition that alludes to mass and weight, Apollo is a lamp made from a solid piece of machine-turned brass or aluminium. Its conical shapes balance end-on-end like spinning gyros, emphasising a dynamic, downward, thrusting force. A lamp with a real heightened material presence, with its surfaces left deliberately raw. The Apollo family comes in a range of colours that can be used singularly or hanging in various heights as a group constellation. A new addition to the family is the distinctive Apollo 180 floor lamp, in lacquered or black anodised aluminium. The upward turning conical shapes give an indirect light.
